GENEX Services, Inc. Acquires Professional Diagnostic Management

Wayne, PA - GENEX Services, Inc. (GENEX) today announced the acquisition of Professional Diagnostic Management (PDM), a national provider of radiology network services to the Workers' Compensation market. PDM is headquartered in Sacramento (Roseville), California and in its fifteen-year industry has established an excellent reputation for customer service and helping its clients control the escalating expense of high-end radiology tests.

The PDM acquisition will expand the GENEX radiology network business and the Roseville location will become a second, national service center for GENEX, providing clients stronger coverage over time zones and geography. As a combined entity - the GENEX Medical Diagnostic Network (www.genexmdn.com) - will be among the four largest businesses serving the Workers' Compensation market nationally.

GENEX (www.genexservices.com) provides insurers, employers and Third Party Administrators with a broad array of managed care solutions and information management capabilities through its 2,000 employees and more than 100 service locations throughout North America. The company has a demonstrated ability to help clients manage and control the medical, wage loss, and productivity costs associated with claims in the worker's compensation, disability, automobile, and health care systems. GENEX services include utilization management, case management, medical bill review, preferred provider organizations, specialty networks, Social Security representation, information management, Medicare Set-Aside and related capabilities.
